

DOCTORAL PROGRAM IN EDUCATIONAL PSYCHOLOGY AND QUANTITATIVE METHODS

DOCTORAL PROGRAM IN EDUCATIONAL PSYCHOLOGY AND QUANTITATIVE METHODS

Our doctoral program in educational psychology and quantitative methods focuses on preparing you to research problems in diverse educational settings. Educational psychologists improve educational processes through the collection and analysis of empirical data. The ultimate goal of this research is to improve teaching and learning, classroom and school organization, inequities in opportunities to learn, the assessment of educational outcomes, and a wide array of other pressing educational issues.

In this program you will:

- > Prepare researchers to solve problems in diverse educational settings.
- > Get rigorous preparation in quantitative research methods (statistics, measurement, secondary analysis of large-scale data sets, and research design).
- > Get involved in educational research projects under faculty supervision with opportunities for presentation and publication.

Who should enroll in this doctoral program?

Students who are interested in cutting-edge educational research, assessment, and data analysis methods should apply. Career opportunities include faculty and other professional researcher positions in colleges and universities, educational assessment and program evaluation specialists in public and private research agencies. Individuals with strong quantitative skills are one of the most sought after professionals with graduate degrees in the U.S. today.

This doctoral program is offered **ON CAMPUS** with online classes offered
